STANDARD OPERATING PROCEDURE

Controlled Use - Antiseptic Handwash - CHG Clinical

DOCUMENT CONTROL

| Field          | Controlled value | Field       | Controlled value |
|----------------|------------------|-------------|------------------|
| SOP number     | ACX-2221-VAR-SOP | Revision    | 1.0              |
| Effective date | 14 SEP 2026      | Next review | 14 SEP 2026      |

1. PURPOSE AND SCOPE

This procedure defines the controlled site use of Antiseptic Handwash - CHG Clinical (ACX-2221-VAR) for approved hand hygiene tasks. It covers product verification, compatibility, safety controls and close-out. Chemical dosing and handling remain governed by the current product label, SDS and site-approved procedure.

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| Applies to | Healthcare / Hospitality / Education / Labs - approved personnel / areas only |
| Exclusions | Any use not covered by the current product label / SDS or site approval       |

2. RESPONSIBILITIES

| Role                  | Responsibility                                                                                                                |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Authorised operator   | Verify the correct product and current controlled documents; follow the approved site procedure and required safety controls. |
| Supervisor / QA / EHS | Maintain current label / SDS availability, confirm site controls, and define any required records or verification.            |

3. APPROVED PRODUCT AND EQUIPMENT

|                                  |                                                                              |
|----------------------------------|------------------------------------------------------------------------------|
| Product                          | Antiseptic Handwash - CHG Clinical / ACX-2221-VAR                            |
| Approved surfaces / equipment    | Only site-approved areas / equipment listed on the current label / procedure |
| PPE                              | None required for normal use                                                 |
| Restrictions / incompatibilities | contact and use only on documented compatible surfaces / areas.              |

4. PROCEDURE

| Step | Action                                                                                        | Acceptance / finish                                                     |
|------|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| 1    | Confirm product identity, SKU, label / SDS revision and task authorisation.                   | Correct product and current controlled documents confirmed.             |
| 2    | Confirm compatible area / equipment, required PPE and site controls before the task.          | Pre-use checks complete; incompatible use excluded.                     |
| 3    | Perform the task only under the current product label and site- approved operating procedure. | No unapproved chemical mixing, dosing or process deviation.             |
| 4    | Complete site-defined finish / rinse / dry, container close-out and any required record.      | Area / equipment left in the site- approved condition; product secured. |

5. SAFETY CONTROLS

| Control             | Requirement                                                                                                         |
|---------------------|---------------------------------------------------------------------------------------------------------------------|
| PPE                 | None required for normal use                                                                                        |
| Critical warnings   | Follow the current product label and SDS. Avoid eye contact and use only on documented compatible surfaces / areas. |
| Emergency reference | Current SDS / label and site emergency procedure                                                                    |
