

Disinfectant Floor Cleaner - 2-in-1

BKC Disinfectant Floor Cleaner Quaternary ammonium compound + detergent surfactants, bactericidal & virucidal Single-Step Floor Cleaning & Disinfection for ward floors, corridors & OPD areas - no two-step mopping

01 **Document control**

DOCUMENT ID ACX-SOP-ACXDFC2IN1VAR	STATUS Professional facility use
MARKET India	SOURCE BASIS Current Alle's ClinX product catalogue + current public SDS

02 **Control requirement**

Use with the current label, SDS, technical instructions and site-specific controls.

03 **Purpose**

Define a repeatable, supervised and documented method for professional use of Disinfectant Floor Cleaner - 2-in-1, including preparation, PPE, dose/dilution, application, verification, incident response and storage.

Scope, roles and stop-work authority

Defines who may use the product, what each role controls, and when work must stop.

01 Scope

BKC Disinfectant Floor Cleaner Quaternary ammonium compound + detergent surfactants, bactericidal & virucidal Single-Step Floor Cleaning & Disinfection for ward floors, corridors & OPD areas - no two-step mopping

02 Roles

Supervisor / facility lead

Operator

Approve task fit, confirm current controlled Follow dose/dilution and sequence exactly; use documents, ensure PPE/access controls and PPE; stop work when conditions fall outside the review deviations. SOP.

EHS / technical reviewer

Procurement / stores

Resolve uncertain compatibility, exposure, Maintain labelled stock, correct segregation, incident or formulation questions before work current revision documents and traceable resumes. product identity.

03 Stop-work authority

- Unexpected reaction, heat, fumes, odour or visible surface attack.
- Damaged or unlabelled container, uncertain product identity or uncertain compatibility.
- Splash/exposure event or uncontrolled spill.

Hazard controls before product handling

Use the current SDS classification and task risk assessment; product appearance or fragrance is not a safety control.

01 Current SDS hazard profile

WARNING GHS07

H315 - Causes skin irritation. H319 - Causes serious eye irritation (concentrate).

02 PPE selection

Protective gloves

Eye protection

03 Primary failure modes

01 Skin / eye irritation

Minimise concentrate contact and splashing; use task-appropriate PPE.

02 Mist / spray

Avoid unnecessary aerosol generation; ventilate enclosed work areas.

03 Wrong dilution / dose

Measure product; do not free-pour where a defined dilution or dose is specified.

04 Incompatible chemistry

Never mix cleaning chemicals unless current controlled documentation explicitly permits it.

Pre-use checklist

No application begins until product identity, compatibility, area controls, PPE and cleanup resources are confirmed.

- 01

Read current SDS
Confirm current label/SDS and site procedure before use.
- 02

Confirm application
Use only for the intended task, surface, equipment or hygiene purpose.
- 03

Prepare the area
Control access, remove incompatible products and arrange ventilation where needed.
- 04

Prepare PPE
Use the PPE stated in the SDS/product literature for concentrate handling and task risk.
- 05

Prepare rinse / cleanup
Have water, wipes or approved cleanup materials ready before starting.

01

Product setup

DOSE / DILUTION	PH / CHEMISTRY REFERENCE
1:50 to 1:100 in water	7.0-9.0

Step-by-step operating procedure

1:50 to 1:100 in water

Prepare

01

Read the current label/SDS, confirm compatibility, isolate the task area and prepare PPE.

Dose / dilute

02

1:50 to 1:100 in water

Apply as directed

03

Dilute at 1:50 to 1:100 in clean water. Mop the floor, changing solution when visibly soiled. Allow to dry completely. No rinsing required at standard dilution.

Verify

04

Confirm the required result, correct finish and safe condition before closing the task.

Close out

05

Reseal and return the product to storage, restore the work area and report any abnormal result or deviation.

Record

06

Record the task, dose/dilution and any deviation where the facility procedure requires traceability.

Quality verification and task release

Application alone is not completion; verify the result and confirm the area is safe to return to service.

01 Completion criteria

- Required soil / contamination / hygiene task has been addressed to the facility standard.
- No visible chemical residue remains where the process requires rinsing or wipe-off.
- No material damage, discolouration, etching, swelling or finish change is visible.
- Area, equipment or item is safe to return to service.
- Container is closed, labelled and returned to the correct storage location.
- Any deviation, repeat cycle, spill, exposure or damage is recorded and escalated.

02 Process data to record

Date / location

Product / batch

Where and when the task occurred. Product identity and batch/lot where available.

Dose / dilution

Operator / supervisor

Actual measured amount or working dilution. Who performed and who released the task.

Deviation / incident

Any repeat, damage, spill, exposure or unusual result.

Surface, material and equipment compatibility

Identify the material before application. Compatibility failures are preventable when limits are checked first.

01

Compatibility matrix

Compatible after check

- Ceramic tile
- vinyl
- terrazzo
- concrete
- sealed marble

Verify before use

- Confirm against current product literature and site requirements.

02

Use-case boundaries

01

Supports consistent professional facility use when applied according to the current product instructions.

Exposure, spill and abnormal reaction

Stop the task, protect people first, then contain and escalate according to the current SDS and site emergency procedure.

01 First aid

Eyes

ACT IMMEDIATELY. Flush eyes with clean water for a minimum of 15 minutes, holding eyelids open and rolling eyes to ensure full irrigation. Remove contact lenses if present and easy to do - continue rinsing. Seek immediate medical/ophthalmological attention even if no symptoms are present.

Skin

Immediately remove contaminated clothing including shoes. Flush affected skin with large amounts of water for at least 15 minutes. Do not scrub. Apply soap if available after initial rinsing. If irritation, redness, or pain persists, seek medical attention. Wash clothing before reuse.

Inhalation

Remove affected person to fresh air immediately. If breathing is difficult, administer oxygen. If breathing has stopped, apply artificial respiration. Keep person warm and at rest. Seek medical attention if symptoms (coughing, throat irritation) persist beyond 30 minutes.

Ingestion

Do NOT induce vomiting. Rinse mouth thoroughly with water. Give the person 1-2 glasses of water to drink if conscious and able to swallow. Do not give anything by mouth to an unconscious person. Seek immediate medical attention. Bring this MSDS and product label to the treating physician.

02 Spill / abnormal reaction

- Restrict access and stop exposure.
- Wear task-appropriate PPE before approaching the spill.
- Prevent uncontrolled spread to drains or incompatible materials.
- Use the current SDS Section 6 for containment and cleanup.
- Escalate large spills, fumes, fire, strong or unexpected chemical odour, unexpected heat or incompatible mixing immediately.

Storage, training and deviation control

Safe use depends on correct storage, competent operators and disciplined stop-work behaviour.

01 Storage controls

Keep out of reach of children. Avoid contact with eyes. Wear gloves during concentrated product handling. 02 Operator competency Identify the correct product, label and current SDS. Explain the approved dose/dilution and application sequence.

02 Operator competency

- Perform rinse/finish and verification steps correctly.
- Report and document spills, exposures, damage and deviations.
- 03 Deviation rule
- Do not improvise

03 Deviation rule

Do not improvise
