

Anionic Surfactant - Alkaline

Linear Alkylbenzene Sulphonate (LAS) with 30-35% w/w Active + Alkaline Carrier Industrial Surfactant Base for cleaning product formulation & bulk blending

5-15% w/w incorporation

DOSE / DILUTION

Follow the current label and measure accurately.

10.0-12.0

PH / CHEMISTRY

Reference value from current product data.

5 Litres / Bulk

PACK

Procurement / refill format.

DANGER - GHS05

H314 - Causes severe skin burns and eye damage.

01 What this guide helps you control

- Correct dose, dilution and application sequence for the intended task.
- Where the product fits, material limits and compatibility checks before use.
- PPE, stop-work conditions, storage and incident-response essentials.
- Direct access to the current SDS, technical documents and procurement resources.

Application scope and controls

Where the product creates value, what PPE is needed, and what must be confirmed before use.

01 Operational value

01 Linear Alkylbenzene Sulphonate (LAS)

Provides the stated active concentration for the intended professional application.

02 Alkaline carrier pH 10-12

Supports consistent professional facility use when applied according to the current product instructions.

03 30-35%

Provides the stated alkaline pH profile for the intended soil and application range.

04 Formulation-ready concentration

Supports measured dosing across the stated dilution or application range.

02 PPE and task controls

Protective gloves

Eye protection

Face shield where splash risk is significant

Respiratory protection only where site risk

03 Pre-use verification

01 Read current SDS

Confirm current label/SDS and site procedure before use.

02 Confirm application

Use only for the intended task, surface, equipment or hygiene purpose.

03 Prepare the area

Control access, remove incompatible products and arrange ventilation where needed.

04 Wear corrosive-duty PPE

Chemical-resistant gloves and eye/face protection are mandatory for concentrate handling.

05 Prepare rinse / cleanup

Have water, wipes or approved cleanup materials ready before starting.

Controlled application sequence

5-15% w/w incorporation

Prepare

01

Read the current label/SDS, confirm compatibility, isolate the task area and prepare PPE.

Incorporation rate 5-15%

02

Incorporation rate 5-15% by weight into cleaning formulations depending on target application and required active level.

Apply as directed

03

Consult TDS for blending guidance.

Rinse / finish

04

Yes - when used as direct cleaner

Verify

05

Confirm the required result, correct finish and safe condition before closing the task.

Close out

06

Reseal and return the product to storage, restore the work area and report any abnormal result or deviation.

Keep the chemistry controlled

More product, longer dwell time or mixing with another cleaner is not automatically safer or more effective. Stay within the current product instructions.

Compatibility and application limits

Confirm the material, surface or equipment before application; avoid preventable damage and rework.

01 Compatibility

Compatible after check

- Compatible surfaces / equipment stated in product literature

Verify before use

- Aluminium / alkali-sensitive finishes unless confirmed
- Unknown surfaces without spot testing

02 Operational value

01 Linear Alkylbenzene Sulphonate (LAS) 30-35%

Provides the stated active concentration for the intended professional application.

02 Application value

Supports consistent professional facility use when applied according to the current product instructions.

03 Alkaline carrier pH 10-12

Provides the stated alkaline pH profile for the intended soil and application range.

04 Formulation-ready concentration

Supports measured dosing across the stated dilution or application range.

Incident response and escalation

Stop work early, protect people first, and use the current SDS and site emergency procedure.

Stop work

Any uncontrolled splash, acid/alkali cross-contact or loss of corrosive-duty PPE. Unexpected reaction, heat, fumes, odour or visible surface attack. Damaged or unlabelled container, uncertain product identity or uncertain compatibility. Splash/exposure event or uncontrolled spill.

01 First-aid summary

Eyes

Flush eyes with clean water for at least 15 minutes, holding eyelids open. Remove contact lenses if easy to do. Continue rinsing and seek medical attention if irritation persists.

Skin

Remove contaminated clothing. Rinse affected skin thoroughly with water. Wash with soap where appropriate. Seek medical attention if irritation, redness or pain persists.

Inhalation

Move the affected person to fresh air and keep at rest. If breathing is difficult or symptoms persist, seek medical attention. Follow the current SDS and site emergency procedure.

Ingestion

Do not induce vomiting. Rinse mouth with water. Do not give anything by mouth to an unconscious person. Seek medical attention promptly and provide the current SDS or product label.

02 Storage

Store in the original labelled container, tightly closed and upright, in a cool, dry, well-ventilated area. Keep away from incompatible materials and follow the current SDS Section 7 for product-specific storage conditions. Do not mix with other chemicals unless explicitly permitted by the current product instructions.
